## DETAILED ACTION

### *Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-9, drawn to a pharmaceutical composition comprising exo-R-mecamylamine, classified in class 514, subclass 661.
- II. Claims 10-11, drawn to a method of treating substance addiction, classified in class 514, subclass 810.
- III. Claims 12-15, drawn to a method of treating Tourette's syndrome, classified in class 514, subclass 661.
- IV. Claims 16-20, drawn to a method of treating neuropsychiatric disorders, classified in class 514, subclass 879.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case Group I is drawn to a composition and Group II is drawn to a method treating substance addiction. The product as claimed can be used in a materially different process of using that product, such as for hypertension as recited in Brossi et al. U.S. Patent No. 5,039,801.

Inventions I and III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case Group I is drawn to a composition and Group III is drawn to a method treating Tourette's syndrome. The product as claimed can be used in a materially different process of using that product, such as for hypertension as recited in Brossi et al. U.S. Patent No. 5,039,801.

Inventions I and IV are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case Group I is drawn to a composition and Group IV is drawn to a method treating neuropsychiatric disorders. The product as claimed can be used in a materially different process of using that product, such as for hypertension as recited in Brossi et al. U.S. Patent No. 5,039,801.

Because these inventions are distinct for the reasons given above and the search required for Group II is not required for Group III, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for Group II is not required for Group IV, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
